

VINYL SIGN INSTALLATION

Find the center mark of the surface to place the sign. Line it up to the center of the sign. Tape lightly in place with masking tape, to approximate level, but centered.

Use a level or tape measure and level the sign by readjusting the masking tape. Stand back and view, make any needed adjustments until your satisfied it is placed properly.

Use any flat, fairly stiff, object to make sure the vinyl sign is adhered to the transfer sheet.

An old credit card or rubber spatula works well. You don't have to press hard, just firmly. Pressing too hard may distort the sign.

Once the sign has been placed where you want it, place long strips of masking tape about center. Extend the tape past the sign and onto the wall

Remove the right smaller piece of tape you used to place the sign.

The vinyl sign has three layers, a Top Transfer Sheet, the Vinyl Sign and last, the Backing Sheet. Carefully separate the Top Transfer Sheet AND Vinyl Sign together exposing the backing sheet.

Now cut away only 1/2 of the backing sheet.

Use a razor knife to cut away, do not tear. Rough edges caused by tearing the backing could adhere under the vinyl sign.

OPTIONAL

Lightly mist down the area to adhere the sign with a solution of 2 or 3 drops of liquid dish soap and 1 L water. Any spray bottle works fine. More drops of liquid dish soap allows for some more movement in final positioning. Although more soap causes longer drying times and less sticking power, until dry. The back of the vinyl sign can also be misted.

You are now ready to adhere 1/2 of the vinyl sign. **SLOWLY** use the tool you used before to smooth down the transfer Sheet, which also adheres the vinyl sign. Use **SHORT** and **LIGHT** strokes to work the sign down from the **CENTER** outwards.

Hold the sign up on the end, do not allow it to drop prematurely.

Remove the remaining pieces of masking tape and **REPEAT THE ABOVE PROCESS** for the other half of the vinyl sign.

Both pieces of the Backing Sheet are now gone and only the Vinyl Sign and Top Transfer Tape should be left on the wall.

Once again use the flat tool to firmly adhere the vinyl sign to the wall.

Now you are ready to remove the Top Transfer Sheet, which reveals the vinyl sign.

For installations with water and soap solution spray the complete Top Transfer Sheet and let sit for 5 mins, this makes it easier to release the sheet without lifting the wet Vinyl Signs Adhesive. If vinyl starts to lift, re-apply and leave to dry. Strong solutions of soap and water may require more drying time before removing the Top Transfer Sheet.

No warranties or guarantees are given for sign installation not performed by us.
